mixing an ester compound with a polymer compound selected from the group consisting of triblock copolymers, star polymers, radial polymers, multi-block copolymers, and combinations thereof,

heating the mixture;

agitating the mixture until the mixture becomes homogeneous; and cooling the mixture,

wherein the gel composition is substantially free of mineral oils, wherein the ester is represented by one of the following formulas:

R_1 - C - O \\
 & R_2
\end{bmatrix}$$

$$\begin{bmatrix}
R_1 - O - C \\
 & R_2
